# HOLISTIC DESIGN SOLUTIONS TO RESIDENTIAL BUILDINGS

# HOLISTIC DESIGN SOLUTIONS TO RESIDENTIAL BUILDINGS

# Summary - Ventilation & Acoustics

## Ventilation

### Window opening

- **Open (free) areas** should include any restrictors, and take into account any security, noise or air quality issues which reduce opening area
- Windows should only be modelled as open when rooms are scheduled to be occupied, unless secure openings are provided
- Internal doors can be included and open as modelled as open during waking hours to improve cross-ventilation

# Summary - Ventilation & Acoustics

## Key overheating risk factors in homes

- **Single aspect**
  - No cross-ventilation – so openings need to be larger
- **Large areas of glazing**
  - Greenhouse effects
  - Solar gain has large radiative component which is not removed with ventilation
- **Limited ventilation**
  - Restricted openings due to:
    - Health and safety concerns (tall buildings)
    - Noise
    - Poor air quality

**Open (free) areas**
