

AIRO

Laboratory Testing in Acoustics & Noise Control

AIRO's Acoustics Laboratory was opened in 1959 as the first purpose built commercial testing station to be operated in the United Kingdom. The laboratory facilities are ideally suited to obtaining reliable acoustic test data under controlled conditions, for a variety of applications. AIRO is free from associations with manufacturing interests in noise control products, and our reports and test certificates are widely accepted as authoritative. With a wealth of testing experience available, our laboratory staff will be pleased to discuss potential clients' requirements for measurements. The range and benefits of our testing services are outlined below; enquiries about these or other measurement specifications are welcomed.

- ★ Testing to British and International Standards
- ★ Measurements for Research & Development
- ★ UKAS Testing Laboratory No. 0483
- ★ Over 50 years Experience of Testing
- ★ Independent & Confidential Service
