

Best practice for environmental measurement: the importance of gathering robust data

Wednesday 26 November 2025

WSP, Chancery Lane, London, WC2A 1AF

10am – 4pm

A focused one-day event exploring the why, what and how of environmental data measurements. Environmental measurements underpin assessments made by consultants. Guidance such as ANC Guidelines – Environmental Sound Measurement Guide (the “green” book) is available but many of us learn best from each other.

This event will highlight the critical role of accurate and consistent environmental sound measurement, drawing on real-world insight and practical approaches from across the industry.

Enhance your learning and skills by an exchange of environmental measurement experiences with your peers facilitated by guest presenters in a friendly and collegiate forum. The event will cover:

- Liaising with EHOs – what they need and why
- An understanding of what you are collecting and why
- Planning for surveys before getting on site and considering equipment and calibration
- Case studies and the importance of gathering the right data
- Examples of when things go right or wrong

Delegate fee covers refreshments including a sandwich lunch

Delegates may also pre-purchase copies of the ANC Green Book “Environmental Sound Measurement Guide” at a reduced price. Note: these must be pre-ordered and are not available to purchase on the day.

Booking form [here](#)

Delegate prices	
MEMBER place	£225 plus VAT (£270) per person
MEMBER ADDITIONAL places	£195 plus VAT (£234) per person
NON-MEMBER place	£275 plus VAT (£330) per person
Green Book	Add £15 per copy for each delegate
